

## Leverage the Power of XBRL for Your Custom Applications

I•Metrix Architect dramatically simplifies the way that organizations consume financial information. The I•Metrix Architect platform incorporates an XML Web Services architecture with XBRL-tagged historical fundamentals to deliver in-depth financial information to your proprietary analytics and custom applications.

Link directly to the I•Metrix database to create dynamic financial analysis applications.

### Free Developers from the Middleware Blues

Adapting new data feeds to existing software applications can often be problematic. I•Metrix Architect solves these issues by leveraging .NET SOAP compliant Web Services to deliver XML data. I•Metrix Architect provides plug-compatible methods that can be used in assembling a service-oriented architecture.

Link directly to the I•Metrix database to create dynamic financial analysis applications. Use your own business logic and presentation layers to shape your mission critical applications. I•Metrix Architect is the perfect solution for IT departments looking to expose information in a controlled yet flexible manner.

### Extensible

I•Metrix Architect enables your IT investments to be realized over greater time periods by delivering data through a standards compliant interface. It reduces development costs and allows you to create custom applications that leverage current capabilities and datasets while remaining extensible for future functionality.

### Security

To provide integrity and confidentiality to SOAP messages transmitted across the Internet, I•Metrix attaches encrypted security tokens to request messages. Security tokens are valid for a defined period and must be regenerated once they expire.

## Capabilities

I•Metrix Architect delivers comprehensive functionality through a standard .NET based SOAP compliant Web Service including:

**Authentication:** Log onto I•Metrix

**Company Search:** Search for companies based upon company name, symbol, sector, industry, SIC, city or state

**Fundamental Data Retrieval:** Retrieve XBRL-formatted fundamental data from the I•Metrix repository

- SEC Document Linkback – Retrieve a URL to the exact line number from which a data element was extracted
- Section Highlighting – Retrieve HTML for the section of the SEC filing with the specific data element highlighted

**Market Data Retrieval:** Retrieve intraday and historical stock quotes and company information

## Content

I•Metrix provides access to XBRL-formatted fundamental data for the U.S. and global markets leveraging GAAP-based taxonomies and standard technologies. It also integrates company intelligence including; intraday market data, historical market data and comprehensive entity information.

## Technical Specifications

- Uses platform independent industry standard Web Services
- WSDL based interface
- Uses HTTP or HTTPS for transport
- All results delivered in a XML format
- Developers can use any XML enabled programming language, including C++, Java, Visual Basic and all languages for the .NET platform
